

## **Blue Care Verbal Consent for Surveillance Testing Regime**

### **Respite Day Centre Clients**

In response to an exposure at the Respite Centre we have commenced a rapid antigen screening program as an additional protection for you, your loved one and our community against COVID-19.

The rapid antigen test (RAT) is a quick and easy swab performed by a trained individual, with results available after 15 minutes. This program is designed to help quickly identify individuals who may have COVID-19, including those who are early on in their infections and those without symptoms (known as asymptomatic).

**Please advise verbal consent that you are willing to undertake this test.**

Thank you for your participation in this program and your ongoing support as we navigate through this pandemic together.
